

Tutorial de criação de conta no Databricks Community Edition

1. Acesse ao link: <http://databricks.com/>

2. Clic em “Try Databricks”

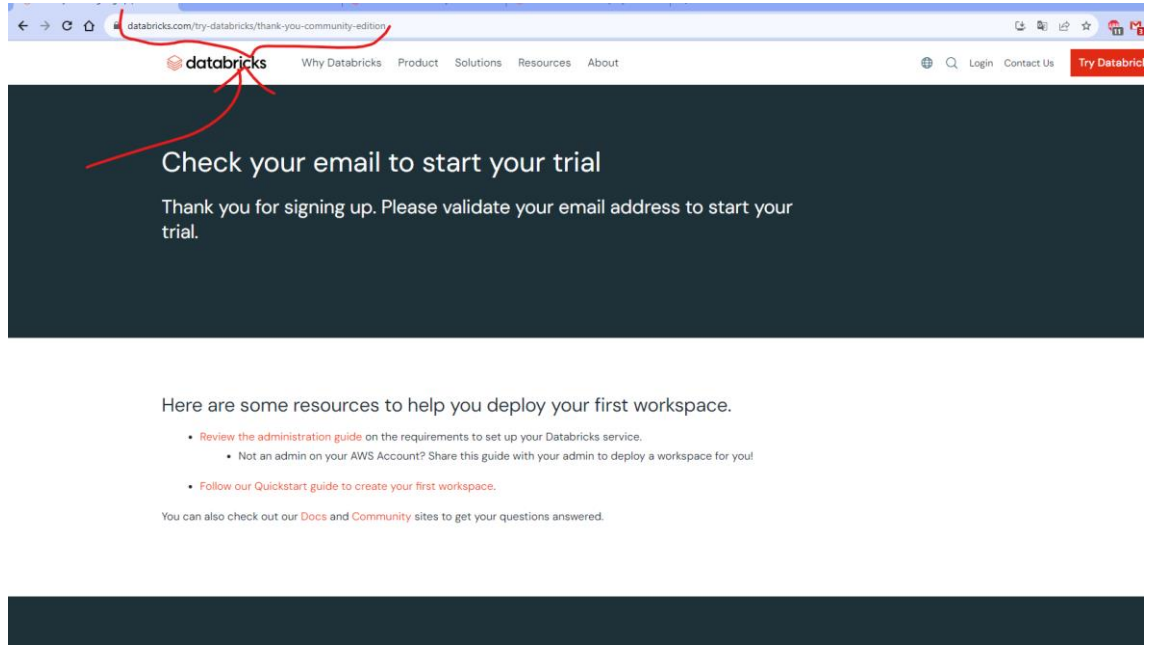

3. Preencha suas informações:

The screenshot shows the Databricks website with the 'Create your Databricks account' form. The form is titled '1/2' and includes fields for First name (Jorge Crastian), Last name (Chamby Diaz), Email (jchambyd@gmail.com), Company (Cloud2Go), Title (Machine Learning), Phone (Optional) (51981276050), and Country (Brazil). A red arrow points to the 'Continue' button. The background features the Databricks logo and a list of benefits: 'Simplify data ingestion and automate ETL', 'Collaborate in your preferred language', and '12x better price/performance than cloud data warehouses'. Logos for Nielsen, Grob, hypericp, and edmunds are also visible.

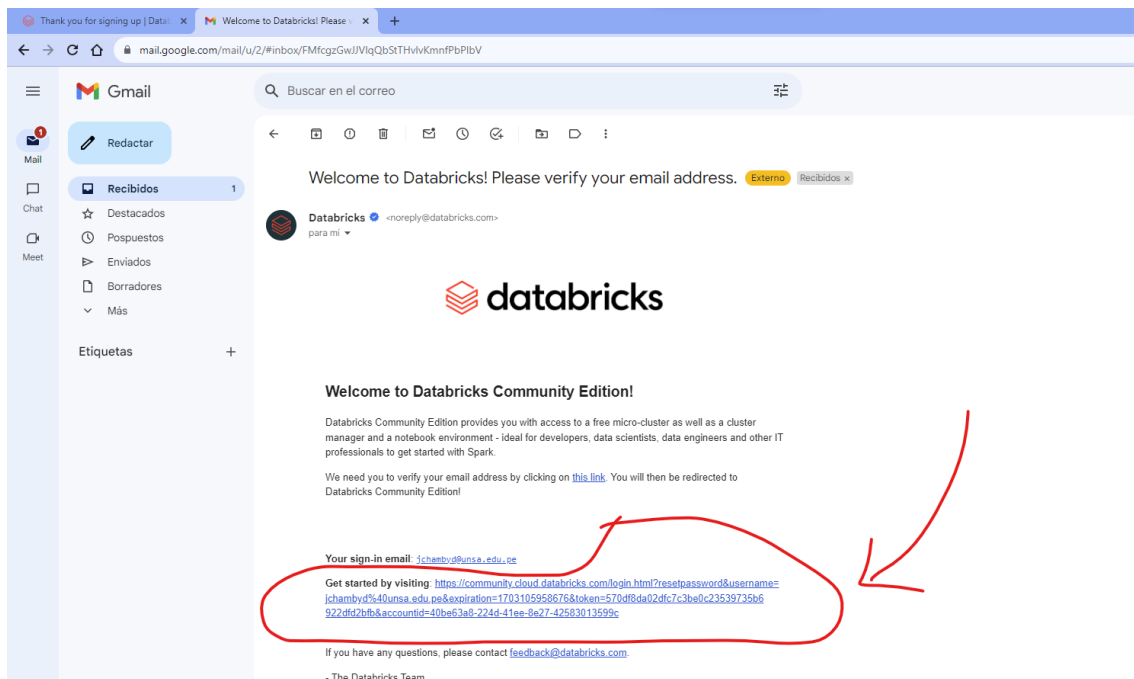

4. SUPER IMPORTANTE!!!!!! Não escolha nenhum provedor de nuvem, selecione "Get started with Community Edition"

The screenshot shows the Databricks website with the 'Choose a cloud provider' form. The form is titled '2/2' and includes options for Amazon Web Services, Microsoft Azure, and Google Cloud Platform. A red arrow points to the 'Continue' button. Below the 'Continue' button, there is a section titled 'Don't have a cloud account?' with the text 'Community Edition is a limited Databricks environment for personal use and training.' and a link 'Get started with Community Edition ->'. A red circle highlights this link. The background features the Databricks logo and a list of benefits: 'Simplify data ingestion and automate ETL', 'Collaborate in your preferred language', and '12x better price/performance than cloud data warehouses'. Logos for Nielsen, Grob, hypericp, and edmunds are also visible.

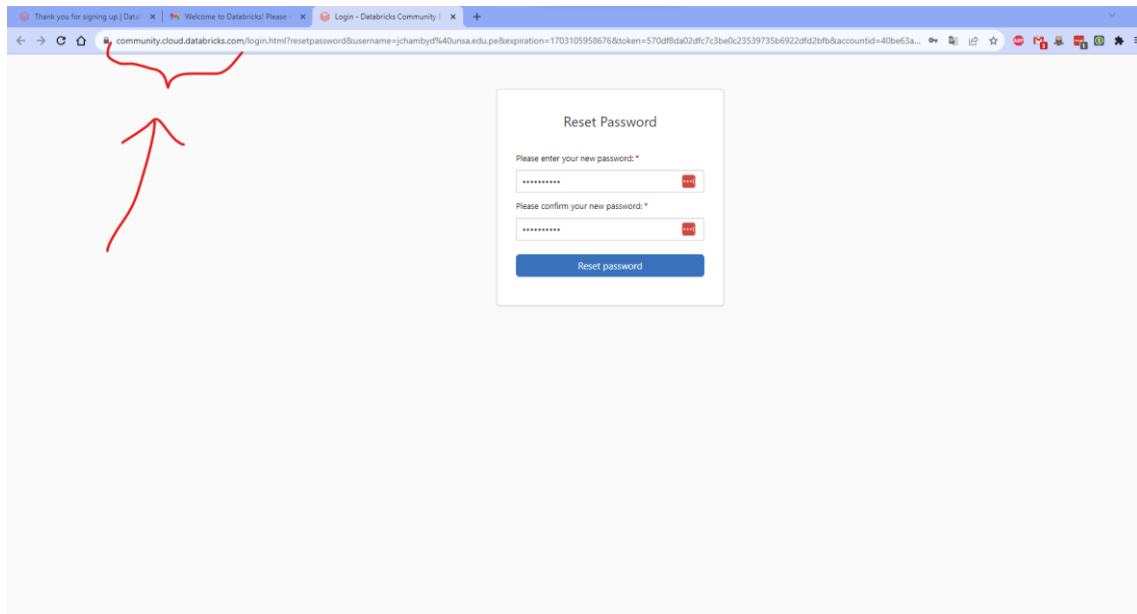

5. Deve aparecer a mensagem informando que receberá um email. Importante conferir que no link do site esteja na parte final “community-edition”. Caso não apareça, volte para o passo anterior (algumas vezes aqui começam a surgir problemas, pois o databricks algumas vezes ignora que queremos a versão Community e pensa que queremos a versão pro)

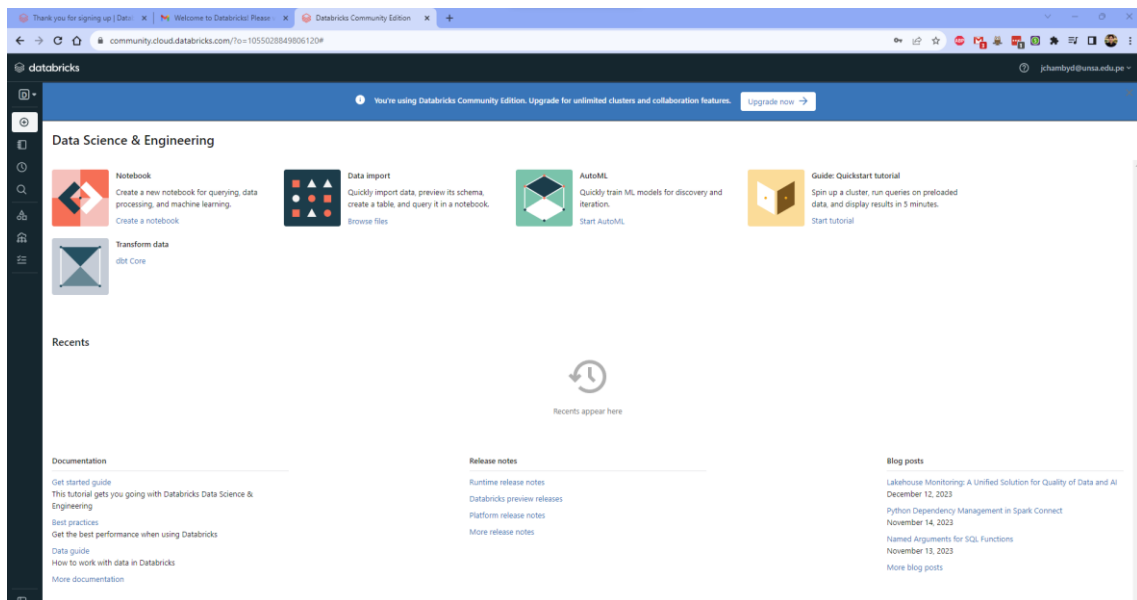

6. No e-mail de confirmação, faça clic no link enviado que começa com “community” (algumas vezes quando clicamos em “this link”, o databricks redireciona para a versão pro, então é melhor clicar no link de community)

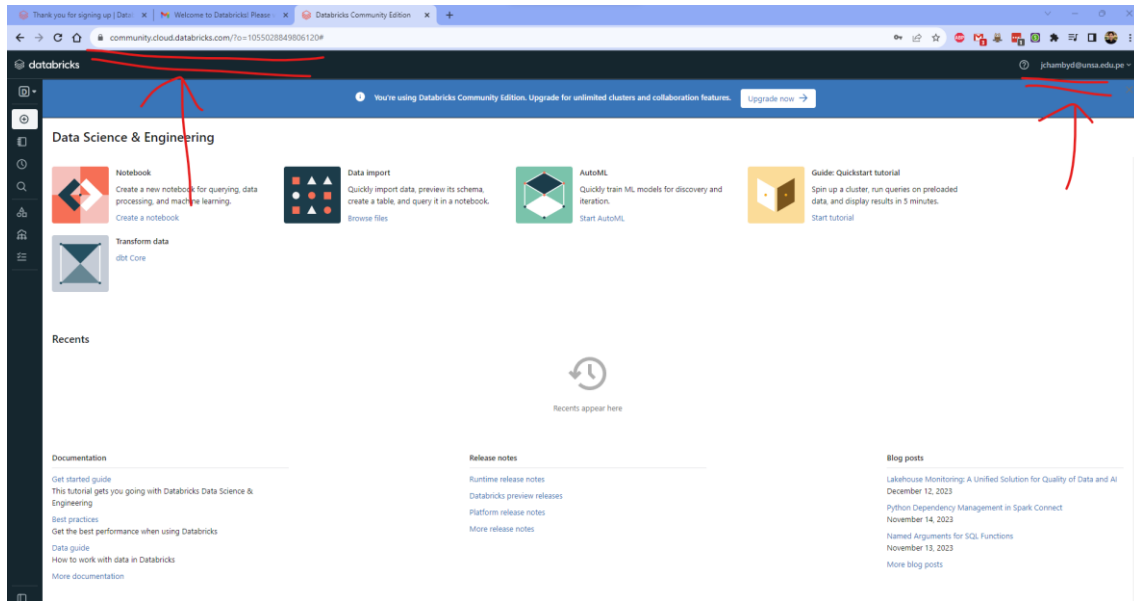

7. Conferir que o link aberto comece com Community, e depois preencher a sua senha. Algumas vezes o site fica carregando e não mostra opção de preencher a senha, se for o caso, feche a janela e tente entrar no modo incógnito usando o link enviado ao e-mail.

8. Pronto você criou uma conta na versão Community!

9. Confira que seu usuário o link “Community estejam corretos”

10. Para acessar novamente, sempre entre desde o link:

<https://community.cloud.databricks.com/login.html> , ou pesquise no google “Databricks community”:
